

2021 YEAR-IN-REVIEW

WaterISAC is the gateway to cyber and physical threat information and best practices for the water and wastewater sector.

MEMBERSHIP

Nearly **500 member utilities** and other sector stakeholders.

Over 3,200 active users.

WaterISAC member utilities serve **221 MILLION** Americans and consumers in **CAN, AUS, and NZ.**

EDUCATION

Distribution of our signature **15 Cybersecurity Fundamentals for Water & Wastewater Utilities** to at least **5,000** water and security professionals.

More than **11,000 items** in our online Resource Center library.

Monthly **cyber threat briefings** and other **webinars** with close to 2,000 participants.

15 speaking engagements virtually and in-person across the nation at industry events.

OUTREACH

98 twice-weekly Security & Resilience Updates containing the latest information on threats, vulnerabilities and best practices for the sector.

Shared water sector cybersecurity articles with more than **200,000 individuals.**

Racked up **162,849 digital views** on our social media platforms. *Make sure to follow us @waterisac!*

HERE IS HOW WE DID IT IN 2021

Maintained information-sharing relationships with federal and state partners:

- Cybersecurity and Infrastructure Security Agency (CISA)
- DHS Intelligence & Analysis (DHS I&A)
- Environmental Protection Agency (EPA)
- Federal Bureau of Investigation (FBI)
- Law enforcement/intelligence fusion centers
- State homeland security and emergency management agencies

Advised federal agencies on key threat alerts.

Provided members with over 1,000 advisories that warned of utility threats and vulnerabilities. Mitigation best practices by security analysts were added to advisories to help utilities reduce their risks.

Collected dozens of member-shared incident reports identifying dozens of water and wastewater cyber attacks and physical incidents. The reports are anonymized and shared in our *Quarterly Water Sector Incident Summaries* to make utilities aware of the threat environment.

Conducted ongoing *Supply Chain Disruptions Surveys*, which have identified challenges for utilities in obtaining treatment chemicals, parts, electronics, constructions materials and more. Survey results are shared back with members and federal partners for mutual awareness and planning.

Coordinated on security challenges with dependent and interdependent critical infrastructure sectors through involvement in the National Council of ISACs and partnerships with other ISACs.

WaterISAC is an ALL hazards center for the water and wastewater sector, working to keep your infrastructure and consumers secure.
