

Enhanced Security Monitoring

May 8, 2018 at 1:00 pm EDT

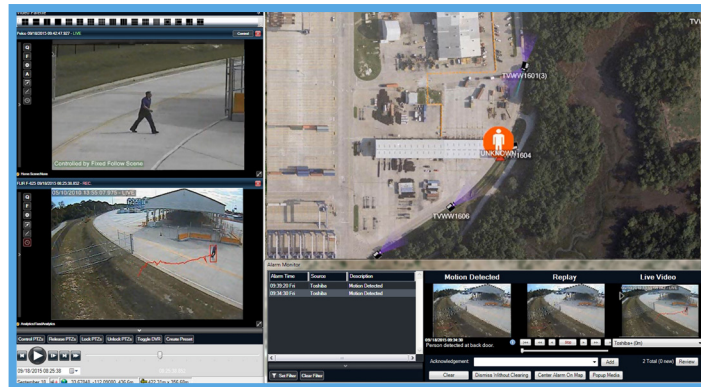

This webinar will discuss design considerations for enhancing the security at water distribution system facilities that are at risk of intentional contamination. Topics covered will include methods to prioritize facilities for security enhancements, intrusion detection, video monitoring, and commissioning best practices. The webinar will also discuss the potential role of advanced metering infrastructure in distribution system security.

*Presented by Nelson Mix
(U.S. EPA, Water Security Division)
and
Armond Gauthier & Steven Frew
(East Bay Municipal Utility District)*

**Register for
the webinar**

Attendees can request documentation for continuing education credits when registering for this webinar. Documentation will be provided after completion of the webinar.

Note: Continuing education credit acceptance is contingent on state and/or organization requirements—EPA cannot guarantee acceptance.
