

# Public Health Surveillance for Detecting Drinking Water Contamination

**October 9, 2018 at 1:00 pm EDT**

**Register for  
the webinar**

This webinar will discuss the role that public health partners can play in detecting and responding to drinking water contamination incidents. It will provide an overview of common public health partners as well as the types of surveillance they perform. Examples of the application of public health surveillance to monitor for water contamination incidents will be presented. There will also be a discussion of procedures and roles and responsibilities during a joint water utility / public health agency investigation of possible water contamination.

*Presented by Steve Allgeier (U.S. EPA, Water Security Division)  
and Jonathan Yoder (Centers for Disease Control and Prevention)*

**Attendees can request documentation for continuing education credits when registering for this webinar. Documentation will be provided after completion of the webinar.**

*Note: Continuing education credit acceptance is contingent on state and/or organization requirements—EPA cannot guarantee acceptance.*
